Description & Analysis

Europe

Traffic in December was at 87% of December 2019 levels. For 2022 overall, traffic was at 83% of 2019 levels. The war in Ukraine continues to affect overflights in several countries. Lithuania, Poland, Estonia and Latvia have lost traffic, whereas Armenia, Albania and Bosnia-Herzegovina have gained 'On average' the network saw 22 432 flights/day in December. The peak day was Friday 23 December (25 355 flights) with traffic at 93.2% of 2019 levels. In December 2022, the Business Aviation (+7.3%) and All-Cargo (+3.9%) market segments continued to be above December 2019 flight levels. The Charter segment recorded a small decrease of -0.6% (vs. December 2019). The Low-Cost segment was down - 10.6% in December compared to December 2019. The Regional (-20.6%) and Mainline (-17.3%) segments have been recovering at a slower pace than Low-Cost throughout the year.

Ryanair was the busiest carrier in December with on average 2 139 flights/day, +5.5% of its 2019 traffic level, followed by Turkish Airlines (1 169 flights/day), easyJet (1 137 flights/day), Lufthansa (940 flights/day) and Air France (742 flights/day).

The busiest airport was Istanbul/iGA (1 198 flights/day) followed by Paris/Charles de Gaulle (1 133 flights/day), London/Heathrow (1 116 flights/day), Amsterdam/Schiphol (1 028 flights/day) and Madrid/Barajas (1 006 flights/day).

Network departure and arrival punctuality increased compared to last month but were still lower than the same period in 2019. Punctuality on the SW and SE axis was consistent with the network level. The mid-December dip in punctuality was due to winter operations, such as de-icing, impacting ground operations. The network (average) available turnaround time decreased strongly mid-December, which is an indication of increased reactionary delays.

There were 794 328 minutes of ATFM delay in December. En-route delays accounted for 56% of these ATFM delays, and airports for 44%. The average en-route ATFM delay per flight for the network was 0.64 min in December (Source: NM).

Delays from the passengers' point of view

For December 2022, the Central Office for Delay Analysis (CODA) reported that the average delay per flight on departure was 19.3 minutes per flight - an increase of 7.5 minutes per flight compared to December 2021. 18% of the total delay can be attributable to air traffic control. Airlines caused 54% of the total delay, resulting from such issues as technical problems, staff shortages or turnaround times that are too tightly scheduled. Airports caused 5% of the delays while the rest (IATA-Code 85,86,71-79,97-99) of around 23% can be allocated to other reasons (Source: CODA-Dashboard-12-2022, Date 02/02/2023).

FABEC

In the FABEC area, traffic decreased by 12.8% in December 2022 compared to the same month in 2019, leading to a 16.2% yearly traffic decrease. Traffic was down in a similar way in 4 ANSPs, from -19.8% in DFS, -19.4% in skeyes, -18.5% in LVNL and -16.8% in MUAC, whereas traffic drop is lower in both Skyguide (-12.0%) and DSNA (-11.6%). Airport traffic was down to a similar extent (-18.5% in the FABEC area) but with even more disparities between ANSPs. Landings decreased by an impressive -30.3% in DFS, -21.5% in skeyes, -18.3% in LVNL, but "only" -14.9% in DSNA or even -8.5% in ANA LUX.

In December 2022, Karlsruhe UAC (123 158 min), Marseille ACC (78 079 min) and Reims ACC (34 865 min) were the units to generate the most en-route ATFM delays. In Karlsruhe, delays were due to 'ATC-Capacity' (68%), 'Staffing' (31%) and 'Weather' (1%). In Marseille, delays were due to 'Special Event' (92% - Flight implementation), 'Staffing' (6%) and 'Airspace Management' (2%); in Reims, 'Staffing' (62%), 'ATC-Capacity' (36%) and 'ATC-Equipment' (2%).

The en-route ATFM delay per flight all causes reached 0.87 min/flt in December 2022 compared to 0.32 min/flt in 2021.

The en-route ATFM delay per flight reached 1.89 min/flt at the end of 2022 and this value is far beyond the target (0.37 min/flt). The en-route ATFM delay CRSTMP causes reached 1.25 min/flt at the end of year; this value is, as well, far beyond the FABEC target (0.25 min/flt).

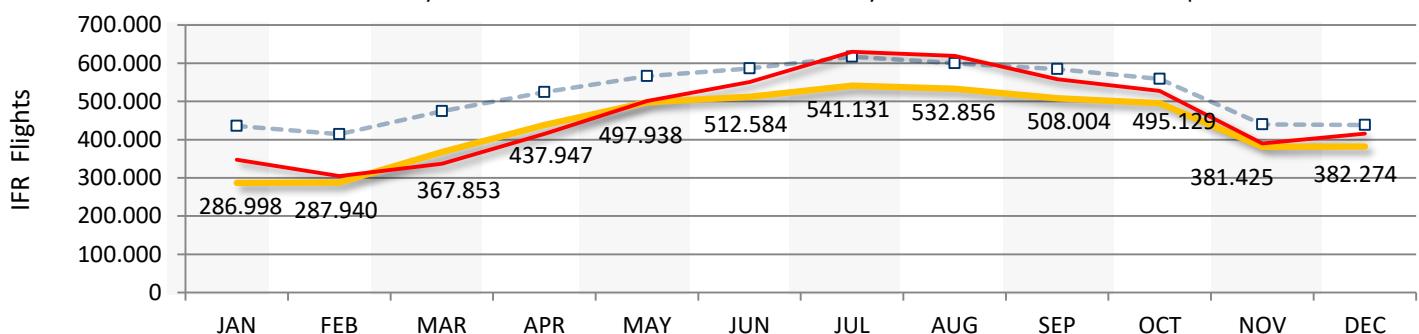

Airport ATFM delays were mainly generated in Paris Orly/LFPO (16 560 min), Amsterdam Schiphol/EHAM (14 595 min) and Frankfurt Main/EDDF (8 209 min). In Paris Orly, delays were due to 'Aerodrome Capacity' (74%), 'Weather' (18%), 'Aerodrome Capacity (ATC)' (4%), 'Staffing' (3%) and 'Aerodrome Services' (1%). In Amsterdam Schiphol, delays were due to 'Weather' (86%) and 'Aerodrome Capacity' (14%); in Frankfurt Main, delays were due to 'Aerodrome Capacity' (64%) and 'Weather' (36%).

In 2022, both LVNL and MUAC achieved their respective en-route CRSTMP ATFM delay per flight target, Skyguide should as well achieve its target after applying the post-ops adjustment process whereas the other ANSPs did not achieve it. For the Arrival ATFM delay per Arrival flight, DSNA and ANA LUX missed their respective CRSTMP arrival ATFM delay per Arrival flight target, contrarily to the other FABEC members.

All Delay Causes

CRSTMP Delay Causes

The guideline for the en-route ATFM delay per movement is a basic cumulative extrapolation of the 2017-2019 monthly allocation and is designed to give an impression, how the YTD figures should be, in order to reach the yearly 2022 published targets (0,37 min per flight for all delay causes and 0,25 min per flight for the delay causes CRSTMP).

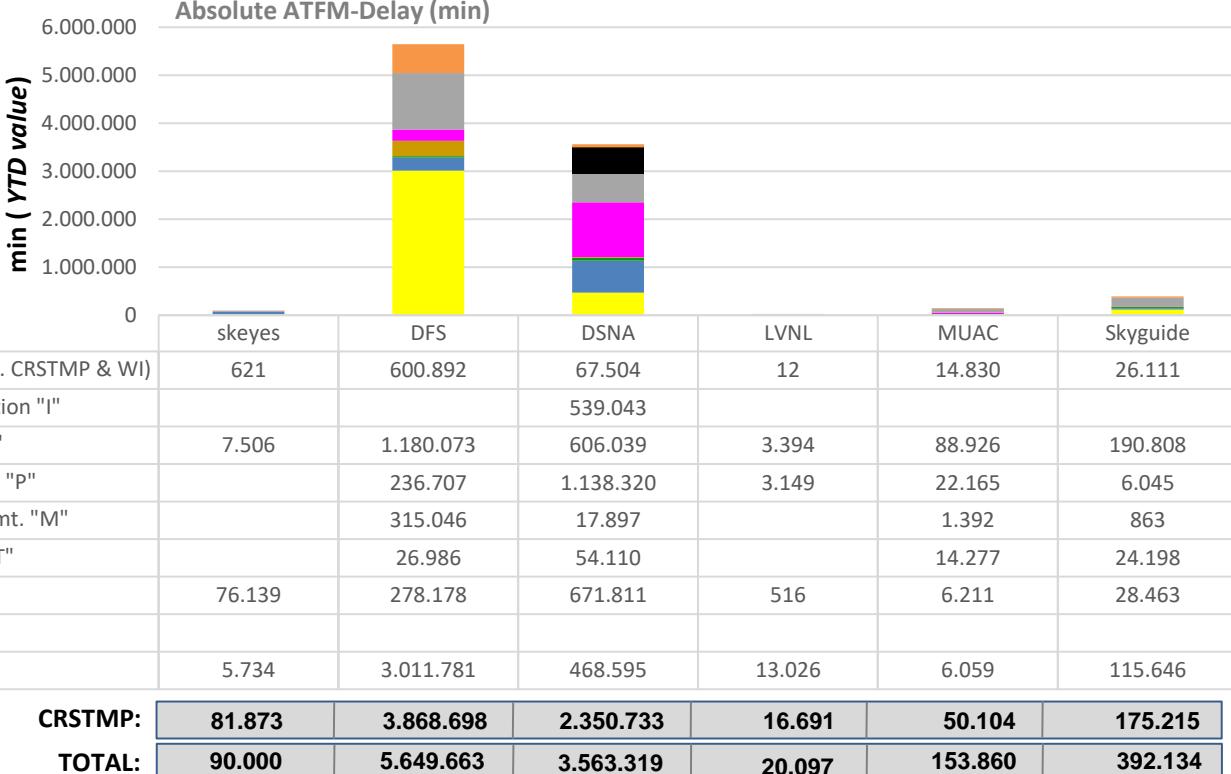

KPI #2: Arrival ATFM delay per controlled flight (FABEC)

	YTD 2022	YTD 2021	YTD 2022	YTD 2021

Average ATFM-Delay per Flight (min/fl.)

KPI #1: En-route ATFM delay per controlled flight (ACC)

KPI #2: Arrival ATFM delay per reason code (FABEC)

KPI #2: Arrival ATFM delay per controlled flight (ANSP)

Glossary

KPI #1:

KPI #1 is set by IR (EU) 2019/317 and is expressed in minutes per flight. The EU-wide targets set for RP3 for this indicator are for 2020: 0.9 min/fl., 2021: 0.35 min/fl., 2022: 0.5 min/fl., 2023: 0.5 min/fl., 2024: 0.5 min/fl.

The targets set at FABEC level are as follows for the indicator 'En-route ATFM delay (all regulation causes) per controlled flight' for **2020**: 3.45 min/fl., **2021**: 0.27 min/fl., **2022**: 0.37 min/fl., **2023**: 0.37 min/fl., **2024**: 0.37 min/fl.

The targets set at FABEC level are as follows for the indicator 'En-route ATFM delay (CRSTMP regulation causes) per controlled flight' for **2020**: n.a., **2021**: n.a., **2022**: 0.25 min/fl., **2023**: 0.25 min/fl., **2024**: 0.25 min/fl.

KPI #2:

KPI #2 is set by IR (EU) 2019/317 and is expressed in minutes per flight. For this indicator, no targets have been defined at EU and FABEC level for RP3. The targets have been set at local level.

Cause	CODE	Guidelines for Application
ATC Capacity	C	En Route: Demand exceeds or complexity reduces declared or expected ATC capacity Airport: Demand exceeds declared or expected ATC capacity.
ATC Industrial Action	I	Reduction in any capacity due to industrial action by ATC staff
ATC Routeings	R	Network solutions / scenarios used to balance demand and capacity
ATC Staffing	S	Unplanned staff shortage reducing expected capacity.
ATC Equipment	T	Reduction of expected or declared capacity due to the non-availability or degradation of equipment used to provide an ATC service.
Accident / Incident	A	Reduction of expected ATC capacity due to an aircraft accident / incident.
Aerodrome Capacity	G	Reduction in declared or expected capacity due to the degradation or non-availability of infrastructure at an airport. e.g. Work in Progress, shortage of aircraft stands etc. Or when demand exceeds expected aerodrome capacity.
Equipment NON ATC- to be Aerodrome Services	E	Reduced capacity due to the degradation or non-availability of support equipment at an airport e.g. Fire Service, De-icing / snow removal equipment or other ground handling equipment.
Industrial Action NON ATC	N	A reduction in expected / planned capacity due to industrial action by non ATC personnel.
Airspace Management	M	Reduction in declared or expected capacity following changes in airspace / route availability due to small scale military activity.
Special Event	P	Reduction in planned, declared or expected capacity or when demand exceeds the above capacities as a result of a major sporting, governmental or social event. It may also be used for ATM system upgrades and transitions. Large multinational military exercises may also use this reason. This category should only be used with prior approval during the planning process.
Weather	W	Reduction in expected capacity due to any weather phenomena. This includes where weather impacts airport infrastructure capacity, but where aerodrome services are operating as planned / expected.
Environmental Issues	V	Reduction in any capacity or when demand exceeds any capacity due to agreed local noise, runway usage or similar procedures. This category should only be used with prior agreement in the planning process.
Other	O	This should only be used in exceptional circumstances when no other category is sufficient. An explanatory ANM remark MUST be given to allow post ops analysis.

CRSTMP:

ATC Capacity (**C**), ATC Routeings (**R**), ATC Staffing (**S**), ATC Equipment (**T**), Airspace Management (**M**), Special Event (**P**); a set of regulation codes which are defined in the Common Charging Scheme Regulation (IR 2019/317) and subject to financial incentive.

Note: Arrival figures (traffic and delay) do only include EBBR and EBLG for Belgium and only EHAM for the Netherlands.

TABLE OF ABBREVIATIONS

ADM - Average en-route ATFM Delay per Movement
ANSP - Air Navigation Service Provider
ATFM - Air Traffic Flow Management
ANM - Aeronautical Notification Message
FABEC - Functional Airspace Block Europe Central

ATM - Air Traffic Management
PRU - Performance Review Unit
YTD - Year to Date value
FPP - FABEC Performace Plan
CODA - Central Office for Delay Analysis
