## Description & Analysis

### Europe

There were 773,344 flights in November, 5.1% more than November 2023. With the start of the winter schedule, traffic decreased as expected compared to October 2024 (- 6,200 flights/day). The network had an average of 26,000 flights/day in November, about 1,250 flights/day more than in November 2023. The busiest day was Friday 08 November with 28,575 flights, which exceeded the busiest day of November 2023 (27,822 flights). The intra-NM southwest axis saw 5.6% growth compared to 2023 and the southeast axis 6.5%, which influenced the network growth of 5.1%. The conflict in Ukraine still affects overflights in several countries. In November 2024, the Low-cost segment continued to lead flight growth, contributing an additional 648 flights per day (+8.7%), followed by the Mainline segment, which added 409 daily flights (+4.4%). Conversely, the Regional segment saw a decline of 2.1%, largely due to fewer daily domestic flights in Sweden (-43), the UK (-38), France (-21), Denmark (-16), and Germany (-16). Business aviation showed modest growth, up 1.7% (+28 flights/day) compared to November 2023. The Charter segment saw a significant rise, increasing by 9.7% compared to November 2023. All-cargo segment remained unchanged from the previous year. Only the Low-cost segment (+5.5%) and Business aviation (+4.8%) surpassed their October 2019 flight levels in November 2024. Overall, total traffic in November 2024 remained 3.8% below November 2019 levels.

Among the Top 20 ACCs, only Paris ACC saw a decrease in traffic compared to November 2023 due to the ongoing implementation of the new ATM system (4 Flight). Notably, Budapest registered a double-digit growth. Ryanair remained the busiest operator averaging 2,491 movements per day (+10.7%) followed by Turkish Airlines (1,347), easyJet (1,204), Lufthansa (1,079) and Air France (882). Istanbul Airport resumed its position as the busiest airport, with an average of 1,339 flights per day, followed by London Heathrow (1,276 flights/day), Amsterdam Schiphol (1,263 flights/day), Paris Charles de Gaulle (1,184 flights/day), and Frankfurt (1,161 flights/day). Network departure punctuality (73.2%) and arrival punctuality (78.5%) were higher than in November 2023. The network was mainly impacted by airport weather and en-route ATC capacity issues. Domestic routes had a departure punctuality of 79.3%, which was higher than the network level. Punctuality on the south-east axis was 76.4% which is an increase of 1% compared to November 2023. Network first rotation departure punctuality was 81.4%, stable compared to 2023. Arrival punctuality improved by 1.3 p.p., reaching 86.1%. Improving first rotation punctuality remains a key objective for the Network Manager (NM).

There were 1.1 million minutes of ATFM delay in November, +22.8% compared to November 2023. En-route ATFM delay represented 46.6% of these ATFM delays and airport 53.4%. The average en-route ATFM delay per flight for the network was 1.4 minutes in November. Total airport ATFM delays increased by +51.3% and total en-route ATFM delays increased by +1.0%. Airport weather and ATC capacity were the main issues in November. Seasonal weather - snow, low visibility, strong winds – impacted operations strongly at Amsterdam/Schiphol and London/Heathrow airports. Heavy rain impacted Barcelona airport on 03 and 04 November. Storm Bert brought a spell of heavy rain and strong winds in Ireland and in the United Kingdom on 23 and 24 November. ATC capacity issues were recorded in the southwest axis sectors due to high demand. (Source: NM).

### Delays from the passengers' point of view

For November 2024, the Central Office for Delay Analysis (CODA) reported that the average delay per flight on departure was 13.2 minutes per flight - a decrease of 0.1 minutes per flight compared to November 2023. 29% of the total delay can be attributable to air traffic control. Airlines caused 50% of the total delay, resulting from such issues as technical problems, staff shortages or turnaround times that are too tightly scheduled. Airports caused 5% of the delays while the rest (IATA-Code 85,86,71- 79,97-99) of around 15% can be allocated to other reasons (Source: CODA-Dashboard-11-2024, Date 13/01/2025).

### FABEC

In the FABEC area, traffic decreased by 3.1% in November 2024 compared to the same month in 2019 leading to a -4.3% traffic evolution after the first 11 months of 2024. In November, traffic was down in some ANSPs and up for others; from -8.3% in DFS, -6.6% in LVNL, -5.2% in skyes, -3.5% in MUAC to an increase of traffic by +2.9% in Skyguide and +5.6% in DSN. Airport traffic dropped significantly (-13.6% in the FABEC area) with high disparities between ANSPs. Landings decreased by an impressive -20.1% in DFS, -13.8% in ANA LUX, to -12.4% in skyes, -11.7% in DSN, -4.1% in Skyguide and -2.3% in LVNL.

In November 2024, Paris ACC (102 668 min) and Karlsruhe UAC (33 730 min) were the units to generate the most en-route ATFM delays. In Paris, delays were due to 'Special Event' (98%, 4-Flight implementation) and 'Weather' (1%); in Karlsruhe, delays were due to 'ATC-Capacity' (80%), 'Equipment (ATC)' (12%), 'Staffing' (7%) and 'Airspace Management' (1%).

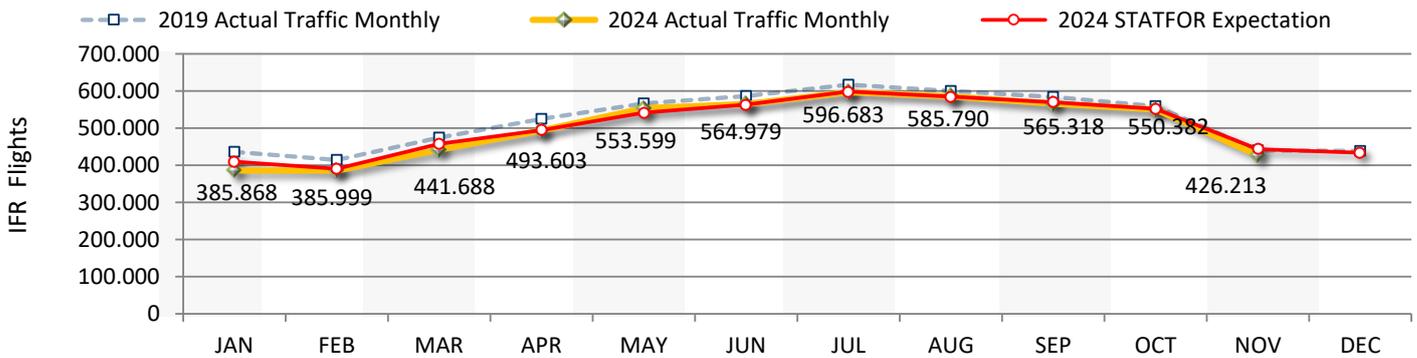

The en-route ATFM delay per flight all causes reached 0.54 min/flt in November 2024 compared to 0.71 min/flt in 2023. After 11 months in 2024, the en-route ATFM delay all causes reaches 1.71 whereas the guideline value is 0.37 min/flt. The en-route ATFM delay CRSTMP causes reached 1.07 min/flt at the end of November; this value is, as well, far beyond the FABEC guideline value (0.26 min/flt).

Airport ATFM delays were mainly generated in Amsterdam Schiphol/EHAM (83 422 min), Frankfurt Main/EDDF (51 636 min) and Paris Charles De Gaulle/LFPG (15 577 min). In Amsterdam Schiphol, delays were due to 'Weather' (68%) and 'Aerodrome Capacity' (32%). In Frankfurt Main, delays were due to 'Aerodrome Capacity' (65%), 'Weather' (34%) and 'Aerodrome Capacity (ATC)' (1%); in Paris Charles de Gaulle, to 'Weather' (95%) and 'Aerodrome Disruptions (ATC)' (5%).

Over the period Jan – Nov 2024, DFS, DSN and Skyguide are not achieving their respective en-route CRSTMP ATFM delay per flight target, contrarily to the other FABEC ANSPs. For the Arrival ATFM delay per Arrival flight, skyes and LVNL are currently the only FABEC ANSPs to achieve their respective CRSTMP arrival ATFM delay per Arrival flight target.

### CRSTMP Delay Causes

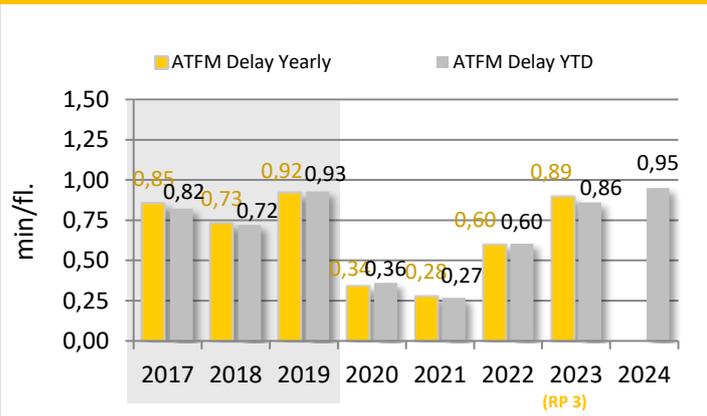

The guideline for the en-route ATFM delay per movement is a basic cumulative extrapolation of the 2017-2019 monthly allocation and is designed to give an impression, how the YTD figures should be, in order to reach the yearly 2024 ambition value set by FABEC States.

## Glossary

Cause	CODE	Guidelines for Application
ATC Capacity	<b>C</b>	En Route: Demand exceeds or complexity reduces declared or expected ATC capacity Airport: Demand exceeds declared or expected ATC capacity.
ATC Industrial Action	<b>I</b>	Reduction in any capacity due to industrial action by ATC staff
ATC Routeings	<b>R</b>	Network solutions / scenarios used to balance demand and capacity
ATC Staffing	<b>S</b>	Unplanned staff shortage reducing expected capacity.
ATC Equipment	<b>T</b>	Reduction of expected or declared capacity due to the non-availability or degradation of equipment used to provide an ATC service.
Accident / Incident	<b>A</b>	Reduction of expected ATC capacity due to an aircraft accident / incident.
Aerodrome Capacity	<b>G</b>	Reduction in declared or expected capacity due to the degradation or non-availability of infrastructure at an airport. e.g. Work in Progress, shortage of aircraft stands etc. Or when demand exceeds expected aerodrome capacity.
Equipment NON ATC- to be Aerodrome Services	<b>E</b>	Reduced capacity due to the degradation or non-availability of support equipment at an airport e.g. Fire Service, De-icing / snow removal equipment or other ground handling equipment.
Industrial Action NON ATC	<b>N</b>	A reduction in expected / planned capacity due to industrial action by non ATC personnel.
Airspace Management	<b>M</b>	Reduction in declared or expected capacity following changes in airspace / route availability due to small scale military activity.
Special Event	<b>P</b>	Reduction in planned, declared or expected capacity or when demand exceeds the above capacities as a result of a major sporting, governmental or social event. It may also be used for ATM system upgrades and transitions. Large multinational military exercises may also use this reason. This category should only be used with prior approval during the planning process.
Weather	<b>W</b>	Reduction in expected capacity due to any weather phenomena. This includes where weather impacts airport infrastructure capacity, but where aerodrome services are operating as planned / expected.
Environmental Issues	<b>V</b>	Reduction in any capacity or when demand exceeds any capacity due to agreed local noise, runway usage or similar procedures. This category should only be used with prior agreement in the planning process.
Other	<b>O</b>	This should only be used in exceptional circumstances when no other category is sufficient. An explanatory ANM remark MUST be given to allow post ops analysis.
