## Description & Analysis

### Europe

There were 1,010,161 flights in June 2024, 5.2% more than in June 2023. Traffic has risen through the summer with more flights to popular tourist destinations such as Spain, Greece and Italy. The network had an average of 33,672 flights/day in June, about 2,400 flights/day more than in June 2023. The busiest day was Friday 14 June with 35,713 flights, which exceeded the busiest day of 2023 (34,637 flights on 07 July). This is still lower than the highest number of 2019 (37,228 on Friday 28 June). The intra-NM SW axis saw 6.7% growth compared to 2023, which influenced the network growth of 5.2%. The conflict in Ukraine still affects overflights in several countries. EUROCONTROL continues to help manage the war's impact on aviation.

Ryanair remained the busiest operator with, on average, 3,573 movements per day followed by easyJet (1,786), Turkish Airlines (1,596), Lufthansa (1,238) and Air France (1,130). Six of the Top 20 air operators grew by more than 10% compared to last year: Ryanair (+10.1%), Norwegian Air Shuttle (+11.1%), Swiss (+11.3%), JET2.COM (+12.9%), Iberia (+11.0%) and ITA (+15.0%).

The busiest airport was Istanbul airport with an average of 1,497 flights/day, followed by Amsterdam Schiphol (1,415 flights/day), Paris-Charles de Gaulle (1,385 flights/day), London Heathrow (1,335 flights/day) and Frankfurt (1,316 flights/day).

In June 2024, the Low-cost segment remained the primary driver of flight growth, adding 1,286 daily flights (+12.4%) to the network compared to June 2023. The Mainline segment saw a modest increase of 3.3% while the Regional segment rose by 2.7% compared to June 2023. Both Business aviation and Charter went up 0.9% respectively. However, the All-cargo segment decreased by -5.4% compared to June 2023, partly due to a reduction in daily flights between Italy and Germany (-11), domestic flows in France (-8) and the UK (-7). Overall, the number of flights in June 2024 reached 97.2% of 2019 levels, with two market segments exceeding June 2019: Business aviation (+12.5%) and Low-cost (+3.9%). Conversely, Charter and Regional were lagging, at -17.7% and -16.8% respectively compared to June 2019.

Network departure punctuality (58.8%) and arrival punctuality (65.1%) were lower than in June 2023. The network was strongly impacted by weather, especially on the south-east axis. Domestic routes had a departure punctuality of 68.3% which was higher than punctuality at network level. Network first rotation departure punctuality was 76.9% and arrival punctuality was 83.6%. Improving first rotation punctuality remains a key objective for the Network Manager (NM). NM has highlighted several ACCs which must increase first rotation opening sectors during Summer 2024.

There were 4.7 million minutes of ATFM delay in June, +28.2% compared to June 2023. En-route ATFM delay represented 84% of these ATFM delays. Total en-route ATFM delays increased by 36.7% and total airport ATFM delays decreased by 3.2%. The average en-route ATFM delay per flight for the network was 3.9 minutes in June 2024. Weather issues and ATC capacity shortage led to flow measures. The final weekend of June had the most severe weather effects on the network in 2024, causing 395,186 minutes of ATFM delay. Convective activity in Karlsruhe UAC impacted operations throughout the month with severe disruption during the last week with a total of 221,895 minutes of ATFM delay.

Budapest ACC was also affected by weather issues and had high ATFM delay per flight. ATC capacity delays increased in Karlsruhe UAC and Budapest ACC due to capacity constraints in conjunction with military traffic and additional complexity (Source: NM).

### Delays from the passengers' point of view

For June 2024, the Central Office for Delay Analysis (CODA) reported that the average delay per flight on departure was 22.2 minutes per flight - an increase of 1.1 minutes per flight compared to June 2023. 47% of the total delay can be attributable to air traffic control. Airlines caused 41% of the total delay, resulting from such issues as technical problems, staff shortages or turnaround times that are too tightly scheduled. Airports caused 4% of the delays while the rest (IATA-Code 85,86,71-79,97-99) of around 9% can be allocated to other reasons (Source: CODA-Dashboard-06-2024, Date 07/08/2024).

### FABEC

In the FABEC area, traffic decreased by 3.6% in June 2024 compared to the same month in 2019 leading to a -5.9% traffic evolution over the first half of 2024. In June, traffic was down in some ANSPs and up for others; from -8.1% LVNL, -7.9% in skeyes, -7.8% in DFS, -1.6% in MUAC to an increase of traffic by +1.2% in Skyguide and +1.4% in DSNA. Airport traffic dropped significantly (-12.0% in the FABEC area) with high disparities between ANSPs. Landings decreased by an impressive -19.0% in DFS, -15.7% in skeyes, to -8.2% in DSNA, -4.9% in LVNL or -3.1% in Skyguide and -2.8% in ANA LUX.

In June 2024, Karlsruhe UAC (588 712 min), Reims ACC (240 603 min) and Marseille ACC (238 763 min) were the units to generate the most en-route ATFM delays. In Karlsruhe, delays were due to 'Weather' (62%), 'ATC-Capacity' (34%), 'Staffing' (2%), 'Equipment (ATC)' (1%) and 'Airspace Management' (1%); in Reims, %, 'Weather' (48%), 'ATC-Capacity' (36%), 'Staffing' (16%) and 'Aerodrome Capacity' (1%); in Marseille, 'Weather' (47%), 'Staffing' (31%), 'ATC-Capacity' (19%), 'Industrial Action (ATC)' (1%), 'Airspace Management' (1%) and 'Equipment (ATC)' (1%).

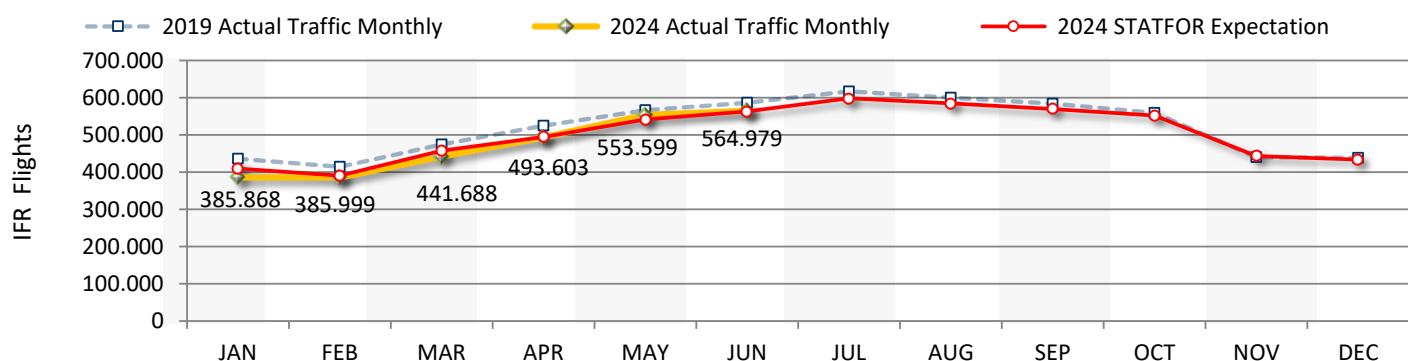

The en-route ATFM delay per flight all causes reached 3.10 min/flt in June 2024 compared to 3.12 min/flt in 2023. After 6 months in 2024, the en-route ATFM delay all causes reaches 1.28 whereas the guideline value is 0.38 min/flt. The en-route ATFM delay CRSTMP causes reached 0.77 min/flt at the end of June; this value is, as well, far beyond the FABEC guideline value (0.25 min/flt).

Airport ATFM delays were mainly generated in Amsterdam Schiphol/EHAM (56 544 min), Zurich/LSZH (35 342 min) and Nice Côte d'Azur/LFMN (27 592 min). In Amsterdam Schiphol, delays were due to 'Aerodrome Capacity' (67%), 'Special Event' (27%), 'Weather' (5%) and 'Aerodrome Capacity (ATC)' (1%). In Zurich, delays were due to 'Weather' (64%), 'Aerodrome Capacity' (17%), 'Aerodrome disruptions (ATC)' (11%) and 'Special Event' (9%); in Nice Côte d'Azur, 'Staffing' (45%), 'Aerodrome Capacity' (27%), 'Weather' (19%) and 'Aerodrome Capacity (ATC)' (10%).

After the first half of 2024, DFS, DSNA and Skyguide are not achieving their respective en-route CRSTMP ATFM delay per flight target, contrarily to the other FABEC ANSPs. For the Arrival ATFM delay per Arrival flight, skeyes and LVNL are currently the only FABEC ANSPs to achieve their respective CRSTMP arrival ATFM delay per Arrival flight target.

**All Delay Causes**

**CRSTMP Delay Causes**

The guideline for the en-route ATFM delay per movement is a basic cumulative extrapolation of the 2017-2019 monthly allocation and is designed to give an impression, how the YTD figures should be, in order to reach the yearly 2024 ambition value set by FABEC States.

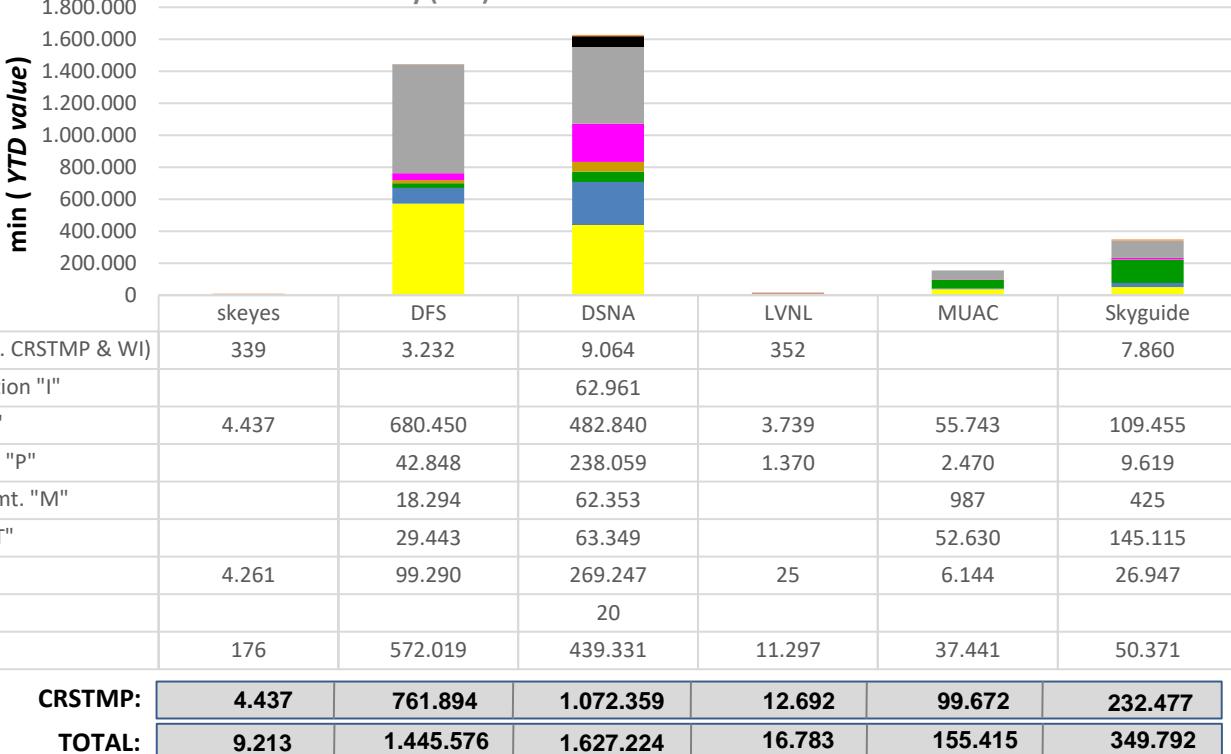

**KPI #2: Arrival ATFM delay per controlled flight (FABEC)**

	YTD 2024	YTD 2023	YTD 2024	YTD 2023

 min/fl. (monthly value)

**KPI #2: Arrival ATFM delay per controlled flight (ANSP)**

## Glossary

<b>Cause</b>	<b>CODE</b>	<b>Guidelines for Application</b>
ATC Capacity	<b>C</b>	En Route: Demand exceeds or complexity reduces declared or expected ATC capacity Airport: Demand exceeds declared or expected ATC capacity.
ATC Industrial Action	<b>I</b>	Reduction in any capacity due to industrial action by ATC staff
ATC Routeings	<b>R</b>	Network solutions / scenarios used to balance demand and capacity
ATC Staffing	<b>S</b>	Unplanned staff shortage reducing expected capacity.
ATC Equipment	<b>T</b>	Reduction of expected or declared capacity due to the non-availability or degradation of equipment used to provide an ATC service.
Accident / Incident	<b>A</b>	Reduction of expected ATC capacity due to an aircraft accident / incident.
Aerodrome Capacity	<b>G</b>	Reduction in declared or expected capacity due to the degradation or non-availability of infrastructure at an airport. e.g. Work in Progress, shortage of aircraft stands etc. Or when demand exceeds expected aerodrome capacity.
Equipment NON ATC- to be Aerodrome Services	<b>E</b>	Reduced capacity due to the degradation or non-availability of support equipment at an airport e.g. Fire Service, De-icing / snow removal equipment or other ground handling equipment.
Industrial Action NON ATC	<b>N</b>	A reduction in expected / planned capacity due to industrial action by non ATC personnel.
Airspace Management	<b>M</b>	Reduction in declared or expected capacity following changes in airspace / route availability due to small scale military activity.
Special Event	<b>P</b>	Reduction in planned, declared or expected capacity or when demand exceeds the above capacities as a result of a major sporting, governmental or social event. It may also be used for ATM system upgrades and transitions. Large multinational military exercises may also use this reason. This category should only be used with prior approval during the planning process.
Weather	<b>W</b>	Reduction in expected capacity due to any weather phenomena. This includes where weather impacts airport infrastructure capacity, but where aerodrome services are operating as planned / expected.
Environmental Issues	<b>V</b>	Reduction in any capacity or when demand exceeds any capacity due to agreed local noise, runway usage or similar procedures. This category should only be used with prior agreement in the planning process.
Other	<b>O</b>	This should only be used in exceptional circumstances when no other category is sufficient. An explanatory ANM remark MUST be given to allow post ops analysis.

### CRSTMP:

ATC Capacity (**C**), ATC Routeings (**R**), ATC Staffing (**S**), ATC Equipment (**T**), Airspace Management (**M**), Special Event (**P**); a set of regulation codes which are defined in the Common Charging Scheme Regulation (IR 2019/317) and subject to financial incentive.

**Note:** Arrival figures (traffic and delay) do only include EBBR and EBLG for Belgium and only EHAM for the Netherlands.

### TABLE OF ABBREVIATIONS

**ADM** - Average en-route ATFM Delay per Movement  
**ANSP** - Air Navigation Service Provider  
**ATFM** - Air Traffic Flow Management  
**ANM** - Aeronautical Notification Message  
**FABEC** - Functional Airspace Block Europe Central

**ATM** - Air Traffic Management  
**PRU** - Performance Review Unit  
**YTD** - Year to Date value  
**FPP** - FABEC Performace Plan  
**CODA** - Central Office for Delay Analysis
